

kal-fire

for the connoisseur

MESSAGE

The full 3-dimensional flame image which characterizes our Fairo ECO-lines is also realized with our ceramic gas log fires. We continue to innovate in this product group, as well.

The secret of the flames

The secret of the flames is hidden in the new 3-dimensional burner. In the burner are ceramic tiles which force the gas to go up via small canals and which make sure that the flames are divided over a larger surface (please see the picture on the left). This results in a more beautiful and lively (3 dimensional) flame image.

What does this mean for you?

The ceramic gas log fires have new dimensions because of the new burners. This is important for you to know. The ceramic gas log fires are now available in the following dimensions:

- 38 x 14 cm
- 47 x 14 cm
- 75 x 14 cm

Enclosed you will find the detailed drawings.

The adjusted dimensions also apply for the coupled ceramic gas log fires.

Kind regards,

The Kal-fire team
